1. This office action, in response to the remarks filed 3/5/2007, is a final office action.

## Response to Arguments

2. Applicant's arguments filed 3/5/2007 have been fully considered but they are not persuasive. In response to applicant's arguments, the recitation "in an interleaved frequency division multiple access system" has not been given patentable weight because the recitation occurs in the preamble. A preamble is generally not accorded any patentable weight where it merely recites the purpose of a process or the intended use of a structure, and where the body of the claim does not depend on the preamble for completeness but, instead, the process steps or structural limitations are able to stand alone. See *In re Hirao*, 535 F.2d 67, 190 USPQ 15 (CCPA 1976) and *Kropa v. Robie*, 187 F.2d 150, 152, 88 USPQ 478, 481 (CCPA 1951).

Applicant states, on pages 4 and 5 of the remarks, the combination of Dent and Vihriala does not disclose the claimed limitations stated in claim 1. The examiner disagrees for the reasons stated in the previous office action and restated below.

For these reasons and the reasons stated in the previous office action, the rejection of the claims is maintained.

## Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

Art Unit: 2611

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

3. Claims 1 and 7 are rejected under 35 U.S.C. 103(a) as being unpatentable over Dent (US 5,894,473) in view of Vihriala (US 2002/0045433).

Regarding claims 1 and 7, Dent discloses an apparatus and method of estimating multiple access interference and recovering user data as shown in figure 5(a). A multi-user signal is received and mixed with a first code (130 and 132). The user signal is decoded and output. The decoded signal is re-encoded and re-modulated (146) and input to a subtractor (148). The subtractor subtracts the re-encoded signal from a delayed version of the input signal to remove the first user signal. The first user signal will act as interference on the subsequent user signals. The output of the subtractor is fed back to a second stage 140'. The second stage will repeat the process stated above to recover the second user signal. The processes will continue to be repeated until all available or desired users are recovered. Dent does not disclose calculating a frequency offset of the input signal and compensating for that frequency offset. Vihriala discloses an apparatus and method for estimating the frequency offset from a received signal. Vihriala discloses a complex phasor is generated for compensating the frequency offset. The frequency compensation can be made before or after the channel estimation thus producing feedback compensation (paragraph 0013). The circuitry for generating the complex phasor for compensating the frequency offset is shown in figures 5 and 6. The frequency offset is estimated from the channel estimate (paragraph 0013 and figure 5). The correction of frequency offset in the

Application/Control Number: 10/607,106

Art Unit: 2611

receiver increases the accuracy of the channel estimate and increases performance (paragraph 0008). For this reason, it would have been obvious for one of ordinary skill in the art at the time of the invention to combine the method and apparatus of Vihriala into the receiver of Dent.

## Allowable Subject Matter

4. Claims 2-6 and 8-13 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

## Conclusion

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
